

## CLIMATOLOGICAL DATA FOR JUNE, 1911.

## DISTRICT NO. 10, GREAT BASIN.

ALFRED H. THIESSEN, District Editor.

## GENERAL SUMMARY.

The first month of the summer was very pleasant, and favorable to vegetation and stock raising. The temperatures were about normal, both in regard to extremes and means, and the rainfall for the district was about one-fourth inch above the normal amount.

There was an unusual number of thunderstorms, and hail was reported at several stations in Nevada.

The average number of rainy days was 5, clear days 15, partly cloudy days 10, and cloudy days 5.

## TEMPERATURE.

Temperature conditions were not at all uniform over the district during June. While the temperature for the district averaged practically normal, there were wide local variations.

The highest monthly means occurred in the northwest part of the Utah area and in southern Nevada; while the lowest occurred usually at the mountain stations of Utah and in the Oregon area.

The highest monthly mean temperature was  $70.5^{\circ}$  at Mount Nebo, Utah, being closely followed by  $70.4^{\circ}$  at Iosepa, Utah, and  $70^{\circ}$  at Mina, Nev. It is very likely that higher mean temperatures than those just cited occurred in southern Nevada, but no reports were received from that portion of Nevada this month. The lowest monthly mean temperature was  $51.5^{\circ}$  at Tahoe, Cal.

While the mean temperature for the whole district was nearly normal, there were wide departures at individual stations. The greatest plus departures was  $7^{\circ}$  at Truckee, Cal., the next greatest being  $+4.9^{\circ}$  at Mount Nebo, Utah. The greatest deficiency was  $7.9^{\circ}$  at Kelton, Utah.

The month opened with nearly normal temperatures over the whole district, and continued remarkably steady for the whole month. There were two periods of warmer weather, from the 10th to the 14th and from the 25th to the 29th. The highest temperatures occurred, as a rule, on the 12th, the highest reported being  $104^{\circ}$  at Corinne, Utah, on that date, although a like temperature occurred at Iosepa, Utah, on the 22d.

The coolest portion of the month extended from the 1st to the 9th, and the majority of stations reported their lowest temperatures during that period. The lowest was  $15^{\circ}$  at Cliff, Cal., on the 4th, the next lowest being  $20^{\circ}$  at Geyser, Nev., on the 1st.

The precipitation for March, April, and May, 1911, was below normal for this district, but during the present month the average rainfall was almost 1 inch, which was about 0.26 inch above normal. Good amounts fell over a large portion of the district, the heaviest, from 1 to 3 inches, having occurred in the Utah and Oregon areas, while locally quite large amounts, over 1 inch, fell in the Nevada area.

The largest monthly amount was 3.05 inches at Seneca, Oreg.; and none occurred at three stations.

In the Utah area, as a rule, the largest amount fell in the mountain districts, though a few of the heavier amounts occurred on the general Great Basin floor, near the mountains. Perhaps the most striking feature of the rainfall in the Utah area was the occurrence of good rains on Great Salt Lake and on the desert regions to the west of the lake. Farmington, Utah, where the precipitation is usually much heavier than at any of the surrounding stations, because of its peculiar topographic situation, received only 0.56 inch, or only about one-half of its June normal, while Grouse Creek, Kelton, Lemay, Lucin, Midlake, Promontory, and Saltair received unusually heavy rains, such as would be considered copious in the mountain districts, and occurring in the driest portion of the State are worthy of remark. While normals have not been established at all these places, it appears that the precipitation was in most cases more than double the June normal.

In the Nevada and Oregon areas the rain was quite uniformly distributed throughout the month, but in the other areas it fell at irregular intervals, the most marked rainy period being that from the 13th to the 22d. Other periods with rain were the 8-9th and the last four days of the month.

Three stations reported light snows.

TABLE 1.—Climatological data for June, 1911. District No. 10, Great Basin.

| Stations.         | Counties.      | Elevation, feet. | Length of record, years. | Temperature, in degrees Fahrenheit. |                            |          |       |         |       |                       | Precipitation, in inches. |                            |                       |                            |  |                       |                               | Sky.                   | Prevailing wind direction. | Observers.                     |             |
